Dear Don:

I am writing to commend you and your product in regards to the successful soil sealant of our lake bottoms. I consider the lake bottoms completely leak free with no evidence of loss of water.

As you might remember, there was one lake that I questioned to be loosing water, that was in fact loosing about .75 inches a day. After dispensing the SS-13 into that lake and to present date there is no sign of seepage into the surrounding soil. In fact, during the process of installing sprinkler systems we have trenched within 2 feet of lake's edge, (directly behind the concrete collar) at a depth of 28 inches and found completely dry soil.

I feel that your system has provided UDC Homes with a durable, maintenance free lake bottom at a considerable savings over other possible systems.

Thank you.

Sincerely,

UDC HOMES LIMITED PARTNERSHIP
